

I am writing in regard to NAB's petition 04-160. My family currently subscribes to XM Satellite radio and are very happy with its contents at this time. I object to the NAB trying to regulate what I will listen to re:traffic and weather, as well as other types of information. I am really disturbed by this method of trying to determine what I will listen to - a trend that is becoming more and more predominant with this current administration. Do I sense a further manipulation of what I hear on the public radio waves???? Don't we have enough of this censorship already? We are paying for such openness in the services provided by XM radio and object to this kind of interference. Let the broadcasters have a little healthy competition; I thought that this is what democracy is all about. Or is it?Please reject this petition on our behalf. We will be watching the results of this vote as it comes up. Thank you for your help.
